Stronger than ever – CTP safety switches with new actuator

EUCHNER is expanding the field of applications for CTP transponder-coded safety switches. Even safety guards requiring locking forces as high as 3,900 N can be reliably secured in combination with a new actuator in future.

The new actuator is compatible with all existing CTP variants and can be used without design adaptations at any time. The unique transponder integrated into the actuator maximizes protection against tampering.

CTP series safety switches offer the user the greatest possible versatility. The safety switch is available in various versions to suit the requirements at the place to be secured, e.g. versions for connection to the AS-Interface, for series connection or for use in ATEX applications. They achieve category 4 / PL e and fulfill all requirements of EN ISO 14119. All CTP versions are characterized by a narrow design and the robust plastic housing with metal head. The high IP67 and IP69K degrees of protection make the CTP an all-rounder suitable for almost every industrial application.

EUCHNER – More than safety.
